What's BIM Track?

BIM Track is the go-to solution for hassle-free communications around BIM coordination. It provides a centralized hub to manage issues, comments, questions, and problems. Working directly in the add-ins for Revit, Navisworks, Tekla Structures, or our online viewer, issues can be created & viewed by all team members. Entirely web-based, and with both an intuitive interface and easy onboarding, BIM Track requires no IT.

Issue management has never been this seamless.

Issue tracking
Create, assign, track & resolve all coordination issues in one platform, accessible from our add-ins or web viewer.

Web viewer
Any stakeholder can easily access the 3D model, 2D documentation and associated issues online.

Reports
Make coordination meetings more productive with PDF reports featuring back links directly to issues.

Metrics
Visualize your issue metrics to track your key performance indicators for accurate insights.

Advantages

Instant collaboration
BIM Track allows stakeholders to work simultaneously with the most up to date issue data.

Accessibility & transparency
Project members all have access to one single source of truth, no matter what the software is used.

Reduce issue management time
Don't wait for coordination meetings & printed reports. Save valuable time: stop searching for the right issue view or finding that one email.

Software integration
Never leave your work environment: create, view, and resolve issues in their original contexts with our add-ins for Revit, Navisworks, and Tekla Structures.

One of the biggest challenges with BIM coordination is creating, organizing, tracking and reporting issues.

This challenge is solved with BIM Track.

DARREN ROOS, CM-BIM, LEEP AP
Corporate BIM/VDC Director, Bernards (USA)

BIM TRACK ®
BETTER COORDINATION
BETTER BUILDINGS

bimtrack.co   info@bimtrack.co

I'm an architect and I want to...

- Deliver an amazing building or infrastructure project

- Reduce coordination management time

- Easily communicate requests with other disciplines

- Keep all team members involved

- Keep track of communications

See how BIM Track can improve your next project:

Simplicity & Transparency

The simplicity opens up a new communication channel to your owners & allows for complete project transparency and trust.
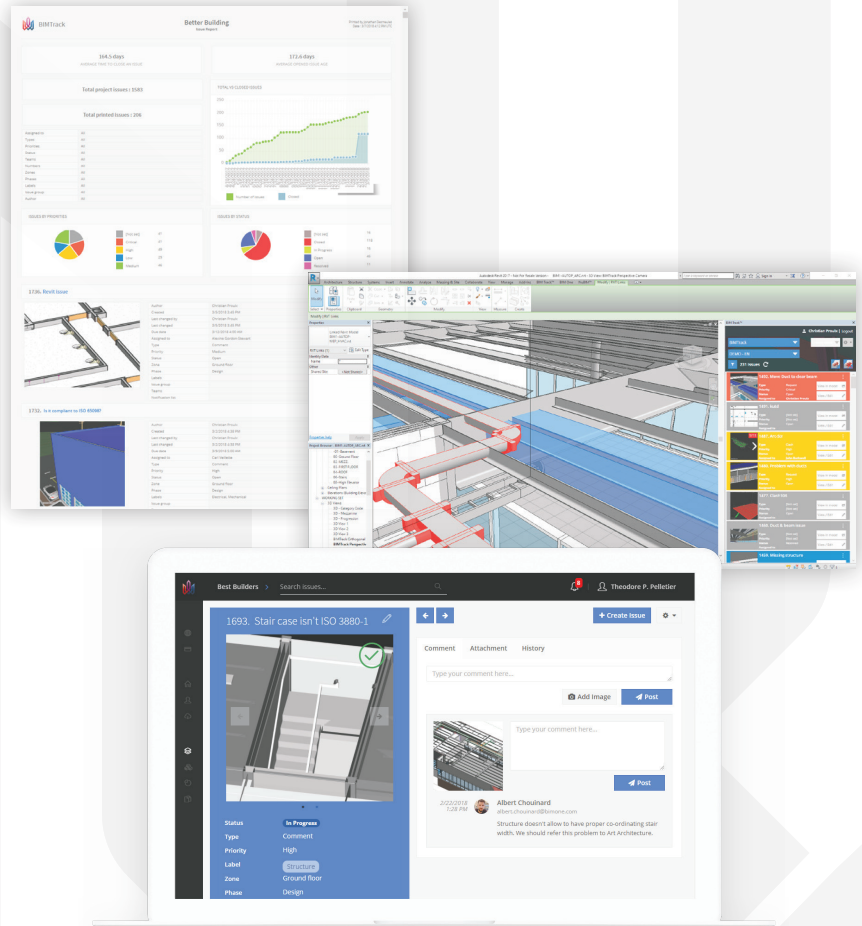

Accountability

Design errors are reduced when it's easy to see who have been assigned to issues, what their priority is, and when the deadline is.

Productivity

Management time is no longer wasted searching through emails, finding views, or understanding PDF reports.

Advanced Filtering

Find your issues, with associated viewpoints, comments, and other data quickly with our advanced filtering.

BIMTRACK®
BETTER COORDINATION
BETTER BUILDINGS

I'm a general contractor and I want to...

- **Stay on time & on budget**
- **Keep my subcontractors accountable**
- **Manage risk and reduce labour**
- **Have happy & involved owners**
- **Get quick answers to my request for information**

See how BIM Track can improve your next project:

Productivity
Information silos, searching your model for the right view, and endless, inefficient coordination meetings are a thing of the past with BIM Track's centralized models, issues, and drawings.
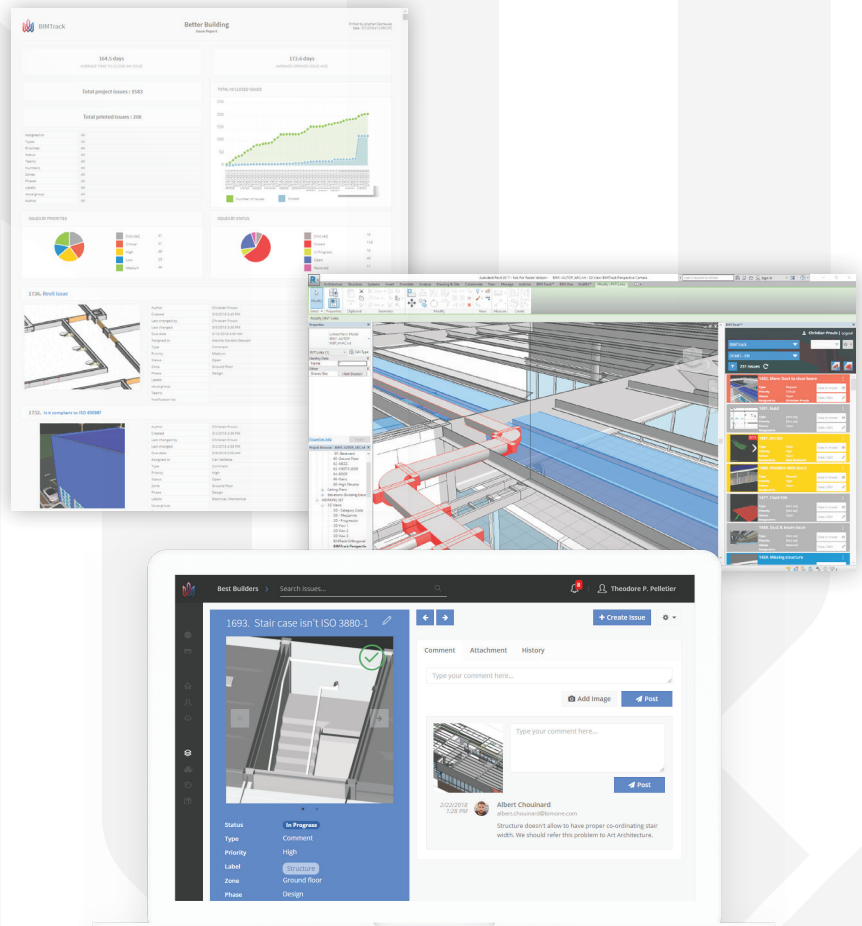

Accountability
Design errors are reduced when it's easy to see who been assigned to issues, what their priority is, and when the deadline is.

Reporting
Get the high level overview you need to identify which projects need the most attention.

Simplicity & Transparency
The simplicity opens up communications across teams, including project managers, owners, and subcontractors that may not have used BIM before.

BIMTRACK®
BETTER COORDINATION
BETTER BUILDINGS

I'm an owner and I want to...

Keep my project on budget & on schedule

Have transparent coordination

Minimize design errors

Reduce risk of the unknown

Easily access design information

Increase the quality of the models for facilities management

See how BIM Track can improve your next project:

Simplicity & Transparency
The simplicity opens up communications to all stakeholders & allows for complete project transparency and trust.
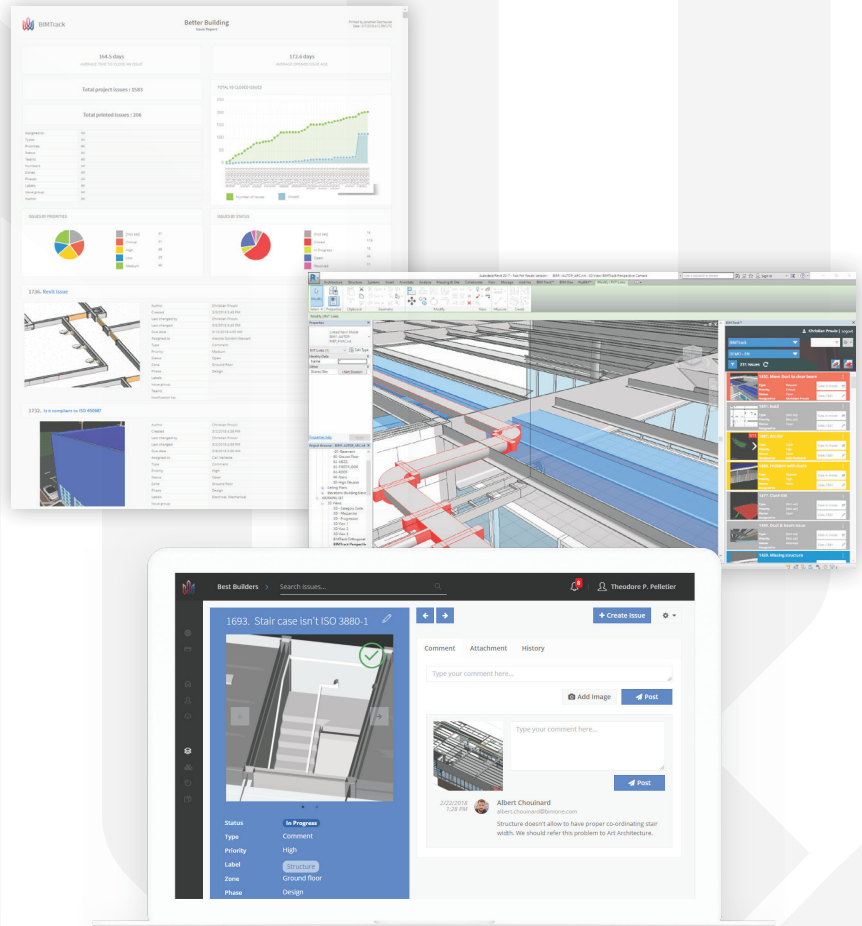

Accountability
Design errors are reduced when it's easy to see who has been assigned to issues, what their priority is, and when the deadline is.

Reporting
Get both high level and detailed reporting of progress on your project's issues, giving a real sense of how well the project is meeting deadlines.

Accurate Models
With add-ins for Revit, NavisWorks & Tekla Structures, issues can be created, tracked, and resolved directly in the authoring software.
